Odds of 3-5 indicate that your profit will be three-fifths of a dollar. In other words, for every R\$5 you bet you can win R\$3 in profit. To determine profit, multiply the amount you bet by the fraction. If I spend R\$15, then my profit for winning is R\$9 (15 x 3/5).

How to convert odds to probability and odds to a probability

To convert from a probability to odds, divide the probability by one minus that probability. So if the probability is 10% or 0.10, then the odds are 0.1/0.9 or 1 to 9 or 0.111.

To convert from odds to a probability, divide the odds by one plus the odds.
