The probability of a ball landing in bucket

t k is the number of paths to the bucket multiplied by the probability of each p

ath: $p(k) = n! / (k! (n - k)!)$

t; Page 5 Clicker Question #1 For a 7-row plin

nko, with 8 buckets labeled 0 to 7, what is the probability of a ball landing in

bucket 1?

The Probability ("Plinko") Boa

rd

At each level,

the penny will be "knocked" either to the left or to the right, each w

ith a 50/50 probability.

But th

ere will be many ways of taking n_1 lefts and n_2 rights over N levels. If all N c

hoices are left, for instance, there is only one way.
