

O O bet365

Given odds against of an event say A is give to be 7 : 2, therefore probability of A is $P(A) = \frac{2}{(7+2)} = \frac{2}{9}$ and from the probability of A we can find the probability of B. If it is as in favor of A then the probability of B is $\frac{1}{9}$. In fact, the odds are 7 to 2, which means that for every 7 times the event does not happen, it happens 2 times. So, the probability of the event happening is $\frac{2}{9}$.
