To check for the existence

of a limit of a function at a point, you can use the following conditions:

The function must

be defined in a punctured neighborhood of the point.

The limit of the function

as it approaches the point must exist and be finite.

What are the conditions

to check for existence of limit of a function at a ...

O O bet365

How do you know a limit does not exist? In short, the limit does not

exist if there is a lack of continuity in the neighbourhood about

the value of interest.

Recall that there doesn't need to be continuity at the value of interest, just the neighbourhood is required.
